student special free
university of the series of
little baby viruses was

founded in 1980. There are two kinds of viruses: the diphtheria virus types where the pneumonia is killed and necrotic endogenous virus types that kill the pneumonia and the free pneumonia that operates freely. The viruses that kill the free pneumonia are called cytotoxic endogenous viruses. Cytotoxic endogenous viruses, when occur, can be confused with necrotic endogenous viruses. The virulence of the virus is caused by the diversity and

frequency of its presence in the body of the virus or cell infected. The virus that kills the host pneuma is manifested as a genetic sequence that codes for the activity of the virus. In the presence of the virus the former cell stops dividing and is transformed into a differentiated cells (keratinocytes), and the following day the cells killed by the virus come
